Install

Make a USB bootable with TobbeOS. Recommended to use Balena Etcher. Turn so off you pc and boot to boot menu and use your bootable USB.

When TobbeOS you will see a terminal and TobbeOS will start. You will need to create user and so on and when TobbeOS install is done, restart your pc.

Welcome to TobbeOS!!!

Use TobbeOS

TobbeOS top bar

When you boot to TobbeOS you will see the top bar and it have some info as updates, number of installed program and network etc. To the left you will see the workspaces, TobbeOS icon and current layout.

Workspaces

The workspaces has name as its use:

- Emacs – Where TobbeOS spawn emacs if installed
- Soc (short for social) – Where social apps spawns as Discord and Signal
- File – Where file manager spawns
- Web – Where web browser spawns
- Work – Where LibreOffice spawns
- Fun – Where Games spawn, like steam
- 7 – 9 is free

How to move between the workspaces and move apps between workspaces

- Window-key or start key compined with 1-9 to move to workspaces.
- Window-key or start key compined with Shift and 1\9 to move windows to workspaces.

You will have to move to the workspace after moving window.

Why some workspaces is blue instead of pink

All Workspaces is pink as default, but some workspaces will become blue. Workspaces is blue if a window is open in the workspace and pink if noting is in a workspace

TobbeOS icon

If you click on the icon you will get the power menu. Here you can turn off, restart, lock, log out and change the password for current logged in user.

Layout display

In TobbeOS come with four layouts.

Layout is how windows spawns on screen if it is more then one window open.

What is the available layouts

1. MonadTall – default layout
2. Verticaltile
3. MonadWide
4. Max

How to change layouts

- Window-key compined with tab circle between layouts
- Window-key compined with Ctrl and 1-4 to change layout.

How to open Windows/App

TobbeOS have a lot of hotkeys to open App and here will you see some of them:

- Window-key compined with W will open The web browser
- Window-key compined with Enter/Return open the terminal
- Window-key compined with F Toggle fullscreen
- Window-key compined with Shift and F open the file manager
- Window-key compined with S open overview of hotkeys
- Window-key compined with Shift and S open overview of aliases for terminal use

How update and install programs

- Open the terminal and type `y` to update the system or Click on the update in the top bar
- Open the terminal and type `ys name_of_program` to install programs

Config files

Where is the config files

All config files for TobbeOS is at file path `/home/user/.config/`
